Recall Kruskal's algorithm:

- 1: Sort the edges:  $c(e_1) \leq c(e_2) \leq \dots \leq c(e_m)$
- 2:  $T \leftarrow \emptyset$
- 3: **for**  $i : 1..m$  **do**
- 4:   **if**  $T \cup \{e_i\}$  has no cycle **then**
- 5:      $T \leftarrow T \cup \{e_i\}$
- 6:   **end if**
- 7: **end for**

How do we check the condition in line 4? That is, how do we check if " $T \cup \{e_i\}$  has no cycle"?

Then, consider the graph below where edges are ordered in non-decreasing order of costs. Show the connected components per stage.
