

Teleoperation of 3D printed Robot Arms

- Steven Romp
- Professors
- Houman Dallali
- &
- Scott Feister

Why pick this as a Capstone?

- I've always loved Robots and the idea of giving back a lost limbs to those who've lost them.
- Our Local Navy has Amputees that this can become a stepping stone for the college to push its more hardware and mechanically inclined students to work towards
- There are so many other applications where this can apply: intricate details that one may need a more human hand for, dangerous or otherwise harmful tasks.
